Manage Peak Power Use

By reducing your electricity consumption during the monthly peaks, you will significantly reduce your total cost of power. We'll help develop a plan for your facility to allow you to participate on a consistent basis.

Coincident Peak Demand (CPD) is a major charge for Alberta's electricity consumers.

By implementing strategies to reduce or offset load during these peak hours can lead to hundreds of thousands of dollars in savings. With flexibility, large energy users can manage their CPD charges better.

By reducing your electricity consumption during the monthly peaks, you will significantly reduce your total cost of power. We'll help you develop a plan that you have a sustainable, long-term energy-management strategy for your facility.

Our team of energy managers will assess your capabilities and enroll you in the program that best suits your operating parameters.

How Can Rodan Help You?

- Forecasts are updated daily
- Concise analysis of the high-risk times
- Daily market monitoring with live IN-DAY notifications
 - Daily email report providing current forecast for the month as well as gauges whether the Alberta electricity system demand may meet or exceed the current month's CPD for that day
 - Real-time email alerts when there is a possibility that the system net-metered demand may exceed the month's current CPD level
 - 2% annual downtime for curtailments

Let Rodan Energy help manage your peak power usage and reduce your growing Coincident Peak Demand costs.

About Rodan Energy Solutions

Rodan Energy delivers intelligent energy solutions to large consumers, distributors, and power producers. With our expertise in metering, Demand Response, energy analytics, and engineering, we enable our clients to reduce their total energy spend, enhance power system reliability, and help develop a sustainable energy future.
