

Rodan Energy – Your Strategic  
Partner in Reducing Energy Costs

## Learn About our Solutions for Large Energy Users

### Earn Demand Response Revenue

By reducing energy consumption when the grid is stressed, you will earn incentive payments from the electricity system operator. We will help you design the solution that best suits your facility's operations and provide you with the tools that make it easy.

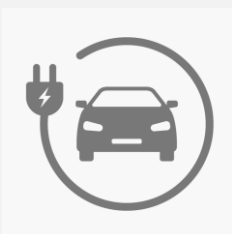

### Reduce Utility Demand Charges

Utilities charge your transmission, distribution and capacity demand charges. Rodan's propriety algorithms, data analytics and AI will provide you the insights on when to strategically reduce your energy consumption at times when utilities calculate costly demand charges on your utility bill.

Rodan Energy works with our clients to develop a strategy for managing demand charges without impacting operational production.

### Energy Storage, Microgrids and EV Charging Management

Leveraging net-zero reliability technologies, Rodan will design, build, maintain and operate energy storage, solar, on-site generation and electric vehicle charging systems that will reduce your energy spend, improve power reliability and quality, and get you to net-zero to help meet your Environmental, Social and Governance (ESG) objectives.

Electric vehicle charging, if improperly designed and managed, can lead to skyrocketing electricity costs. Our high-power level 2 charging stations and a suite of control software applications will enable your businesses to integrate electric vehicle charging with minimal impact on operational costs and sustainability performance.

## Utility Bill Management

We review and monitor our clients' billing statements for errors and inaccurate tariff allocations. Mistakes often are a result of improper rate structure allocation, inaccurate metering and improperly inputted settlement multipliers. We can also help you reduce the time spent processing large volumes of utility bills, avoid paying late fees and erroneous charges on the bill, and access data for easy reporting and visibility into financial and sustainability performance.

## Energy Supply Management

Our energy supply management specialists can provide customized assessments of supply-side dynamics based on contracts in place, the current regulatory and market conditions, and carbon market demands and our knowledge of future trends that could impact energy delivery and pricing.

As one of the largest independent energy service providers, Rodan Energy is not affiliated with specific energy suppliers or equipment manufacturers; our spectrum of energy services objectively leads each customer toward the optimal solution for their unique needs.

### Let us Help

Rodan Energy helps businesses develop a strategy to improve sustainability performance and streamline reporting to regulations and industry standards.

## Why Rodan Energy?

We make energy management easy. For over two decades, Rodan's energy experts have been helping large energy users develop and execute strategies that make sustainable attainable. Our unique combination of expertise in power systems engineering, energy market operations, data analytics and software with a practical and commercial approach is what set us above the rest.

Our top 50 clients have been loyal customers for an average of 15 years – contact us to learn about the Rodan difference.
